

Module Wise Question Bank Network Layer and Routing

Module No: 3

Qn No.	Question	RBTL	CO
1	List the design issues of the Network Layer.	L1	CO4
2	Define the main function of the Network Layer .	L1	CO4
3	Summarize the differences between IPv4 and IPv6 .	L2	CO4
4	Describe the importance of Internet Control Protocols (ICMP)	L2	CO4
5	Use an example to explain how Congestion Control Algorithms reduce packet loss	L3	CO4
6	Explain the working of OSPF in a small network.	L2	CO4
7	Explain which transport-layer protocol and port BGP uses to establish its peer sessions and why that choice is important.	L2	CO4
8	Apply the Distance Vector Routing algorithm to determine the best path between nodes in a given network. 	L3	CO4
9	Apply Dijkstra's Algorithm to compute the shortest path . 	L3	CO4
10	Explain the structure and addressing mechanism of IPv4 in computer networks.	L2	CO4
11	Explain with an example how BGP enables communication between four different Autonomous Systems (AS).	L2	CO4
12	List any two differences between BGP and OSPF	L1	CO4
13	What is meant by routing in ad-hoc networks?	L1	CO4

Module Wise Question Bank Network Layer and Routing

Module No: 3

14	Explain the concept of Flooding in routing.	L2	CO4
15	Explain the features and advantages of IPv6 over IPv4.	L2	CO4
16	Apply the Link state Routing algorithm to determine the best path between nodes in a given network. 	L3	CO4
17	What is Routing algorithm? and Explain the difference between adaptive and non-adaptive routing algorithms.	L1,L2	CO4
18	Differentiate between Virtual Circuit and Datagram networks.	L2	CO4
19	Explain the concept of closed-loop and open-loop congestion control.	L2	CO4
20	What is the structure of an IPv4 datagram header?	L1	CO4
