

Module Wise Question Bank

Module 4: Transport Layer

Qn No.	Question	RBTL	CO	Marks
1	Briefly explain UDP & its services with limitations, Characteristics and Use cases?	L2	CO4	10
2	With general format, illustrate various field of UDP segment. Demonstrate how checksum is calculated?	L3	CO4	10
3	Explain the RTP protocol Stack and RTP Protocol Header?	L2	CO4	10
4	Discuss TCP & its services?	L2	CO4	10
5	With neat diagram, Describe TCP Congestion control ?	L4	CO4	10
6	Explain different techniques in TCP Sliding window management?	L3	CO4	10
7	Briefly explain different Mechanism to congestion control?	L3	CO4	10
8	With general format, Summarize various field of TCP segment?	L2	CO4	10
9	Classify the different quality of services(QoS) in the Transportation layer?	L3	CO4	10
10	Compare TCP and UDP in terms of features, header format and services?	L3	CO4	10
11	Describe remote procedure call and its implementation?	L3	CO4	10
12	Briefly explain TCP Protocol and Discuss the TCP Service Model?	L2	CO4	10
13	Explain TCP Timer Management?	L2	CO4	10
14	Explain RTCP? Summarize the functions of RTCP in multimedia communication?	L2	CO4	10
15	Explain TCP connection establishment using the three-way handshake and TCP Connection Release?	L2	CO4	10
16	Explain the TCP segment header in detail?	L2	CO4	10
17	Discuss the purpose of the UDP checksum and the role of the pseudo-header in checksum calculation?	L2	CO4	10
18	Describe the role of sequence number and timestamp fields in RTP. How is jitter controlled using buffering in RTP/RTCP?	L2	CO4	10
19	Summarize the following: I) Nagle's algorithm II) KARN'S algorithm	L2	CO4	10
