

Module_5_Question Bank

Qn No.	Questions	RBTL	CO
1	Explain why DNS is needed in computer networks. Compare the use of IP addresses and domain names with suitable examples.	L2	CO5
2	With the help of an example, explain how the DNS lookup process works, from stub resolver to authoritative name server.	L2	CO5
3	Discuss the hierarchical structure of DNS. How does it ensure uniqueness and avoid naming conflicts across the Internet?	L2	CO5
4	Illustrate the difference between absolute and relative domain names using examples. Why is this distinction important?	L2	CO5
5	Describe the role of registries and registrars in domain name registration. How does ICANN manage this process?	L2	CO5
6	DNS uses caching to speed up queries. Evaluate the advantages and potential issues of caching in DNS resolution.	L2	CO5
7	Compare the different types of DNS resource records (A, AAAA, NS, MX, CNAME, PTR, SRV, SPF, TXT). Illustrate with at least two practical examples.	L2	CO5
8	Analyze how DNS zones and name servers divide the namespace. Why is this division necessary, and how does it improve reliability?	L3	CO5
9	Examine the role of root name servers in the DNS hierarchy. How do replication and any cast routing enhance their performance?	L3	CO5
10	Explain MIME, its message format and functioning	L2	CO5
11	Compare HTTP and HTTPS	L2	CO5
12	Explain the architectural overview of world wide web	L2	CO5
13	Describe about SMTP	L2	CO5
14	Explain RFC335, its header structure and functioning.	L2	CO5
15	Describe about user agent in electronic mail	L2	CO5
16	Explain the architectural overview and message formats of electronic mail.	L2	CO5
17	Explain various request methods of HTTP.	L2	CO5
18	Explain about File Transfer Protocol.	L2	CO5
